

We appreciate the partnership with Minnesota Breastfeeding Coalition in our project. It is our sincere hope to have Becker County Community Health be an example of a supportive breastfeeding business, and be a leader in our community. While Shelly and I were painting and getting the room ready we had many people stop by and it provided lots of opportunities for education. Our new county administrator was able to see the work from beginning to end, and our director was so supportive. The room is warm and inviting, and already has made a difference in education, morale, and now is open to breastfeeding families. As space changes allow, our hope is that this room will become only a lactation support room. This is a step in the right direction for our agency, our county, community, and most importantly with breastfeeding families and the health of our community's children.
